MENB  
MCV4

FLU after 6 months and every year after.

Two doses given at least four weeks apart are recommended for children aged 6 months through 8 years of age who are getting an influenza (flu) vaccine for the first time and for some other children in this age group

*If your child has any medical conditions that put him/her at risk for infection or is traveling outside the United States, talk to your child's doctor about additional vaccines that they may need.*
